

Flanged Immersion Heaters Description

FLANGED IMMERSION HEATER ORDERING INFORMATION

COMPLETE FORM BELOW

Flanged Immersion Heaters are used in large capacity vessels, for high temperature and pressure applications. Flanged Immersion Heaters are installed by bolting the unit to a matching flange welded to the vessel. Watt densities from

90 Watts/sq inch, Explosion Proof (NEMA7), Corrosion Resistant (NEMA 4X), General Purpose and Standoff Terminal housings are available. A number of sheath materials like Titanium, Incoloy, Stainless Steel, Steel, and Copper can be used as required for specific applications. Standard Flanged Immersion Heaters have a 150 lbs flanges but 300 lbs flanges are also available. To

guarantee sheath material and watt density compatibility with material or process being heated consult NPH.

Flanged Immersion Heaters Features

- High watt densities, wattage's in smaller areas
- Passivated 316 stainless steel option
- Sheath temperatures to 1200°F
- Low watt densities possible for delicate applications
- ANSI flanges from 2" to 24" High
- pressure flanges 300 lbs Applications
- solids, liquids, gases.
